

NFTIZ MARKETPLACE

NFT Overview

Non fungible Tokens abbreviated as NFT are **cryptographic tokens** that represent one-of-a-kind assets. Within a blockchain network, they serve as verifiable evidence of validity and ownership. Since NFTs are not replaceable, they generate scarcity in the digital realm.

Cutting Edge Security Features

AES Encryption

Users have a safety net against data theft thanks to an advanced encryption standard.

The network security layer monitors and filters incoming and outgoing network traffic based on previously defined security rules within the platform.

Firewall Setup

Security OAuth tokens

An additional layer of protection used to ensure that persons attempting to access an online account are who they claim to be

Database Backup Weekly-Monthly

The Service lifecycle process and keeps track of modifications in a separate section of the database and adds them to the relevant file at the conclusion of the operation at regular intervals.

Existing personally identifying information (PII) - Using email eliminates the need for your consumers to supply new PII such as personal information, ensuring privacy and reliability.

2FA via Email

Project 1: Marketplace for artists and musicians

Summary

The NFT marketplace allows independent artists and musicians to list their work on the marketplace and earn when it is sold or auctioned.

01

Key outcomes

- Unique sneak peek feature of the storefront that builds interest of the users
- Royalty additions to make assets truly valuable and life-long.
- Quick user support and responsive UI wins the trust of the users

Case Studies

Project 2: Marketplace for sports collectibles

Summary

A NFT marketplace that allows sports enthusiasts to own moments of their favorite personalities and trade them.

02

Key outcomes

- Timely airdrops of various sports moments increase user-base and popularity among fans.
- Collections of unpopular sports or games to create awareness about it
- Communities to connect with fans and find top collectors

MetaMask Wallet Integration

MetaMask is a software cryptocurrency wallet used to interact with the Ethereum blockchain. It allows users to access their Ethereum wallet through a browser extension or mobile app, which can then be used to interact with decentralized applications.

BSC

Binance Smart Chain (BSC) is a blockchain network built for running smart contract-based applications. BSC runs in parallel with Binance's native Binance Chain (BC), which allows users to get the best of both worlds: the high transaction capacity of BC and the smart contract functionality of BSC.
